- Down**
- 1. This is the part of your HVAC unit that sucks air in
  - 2. This is the part of your HVAC unit that pushes air out
  - 3. The type of duct cleaning we do
  - 4. The filtration we use for our vacuum
  - 5. A technique used to clean air ducts
  - 9. The tool used at the end of the air hose

## YOU CAN FIND THE ANSWERS HERE

Atlantic Duct Cleaning has been a member of NADCA since 1995, when we started cleaning air ducts. We clean the Air Ducts inside of your home. On your HVAC unit, there are two parts we clean. The supply ductwork pushes the air out, and the return ductwork sucks the air in. We perform source removal duct cleaning. To ensure everything is clean, we use a HyperVac which is a high powered vacuum to remove dust and debris. We use HEPA filtration with our vacuum to ensure a thorough cleaning. One technique we use to clean your air duct is the air sweep method. We use compressed air with an Air Whip attached at the end of the hose to help dislodge debris. Another item in your home we clean is the dryer vent, you should have this cleaned every 1-2 years. To keep birds out of your dryer vent, you should put a bird guard on the outside opening. The last service we provide is AeroSeal, this seals the ducts from the inside. Thank you for choosing Atlantic Duct Cleaning for your service, we look forward to keeping your home clean, efficient, and safe.
